COPPER LENS

A Copper sunglass lens is ideal for your activities and needs.

Copper sunglass lenses will enhance your vision by:

- Cutting through blue light which is often experienced as haze
- Providing additional contrast and depth perception
- Enhancing vision when driving in varying light conditions
- Highlighting green and red colours, along with colour definition
- Being particularly effective at dawn and dusk
- Performing well in shady or overcast conditions

Even better, a **polarized Copper** lens provides the additional enhancements to your vision:

- Blocks dangerous and uncomfortable blinding glare
- Delivers greater depth perception
- Substantially enhances contrast
- Provides more precise and detailed vision
- Colours are more vibrant

If you require vision correction and need a prescription sunglass lens, ask your optometrist about NuPolar polarized lenses.

NuPolar are the most recommended polarized prescription lenses by eye-care professionals. NuPolar is trusted to deliver long lasting quality to wearers, provides 100% UV blockage, and delivers exceptional and vibrant outdoor vision.

COPPER LENS STYLES

NUPOLAR®
solid

Copper

NuPolar solid polarized lenses are an even and solid colour over the entire lens and provide 100% UV blockage.
